Subject: Total Organic Carbon and
 Rock-Eval Pyrolysis
 Well: True Oil Company
 No. 21 Medina
 Chevron Job Nos.: P-4079-1
 CMEN-1120
 Our Job No.: 83075

Dear Mr. Jacobson:

The following report contains the analytical results of 30 samples in the interval 3620 to 9000 feet from the True Oil Company No. 21 Medina, Colfax County, N.M. All organic carbon and Rock-Eval Pyrolysis data is presented in Table 2.

The original pyrolysis pyrograms have been returned as requested.

Thank you for the opportunity to be of service to Chevron USA. If you have any questions or if we may be of further assistance, please do not hesitate to call us.

Sincerely,

CORE LABORATORIES, INC.

BIOSTRATIGRAPHIC STUDY NO. 1176
PALYNOLOGY REPORT
P4079

Location

True Oil Co. #21 Medina
Sec. 25-24N-16E
Colfax County, New Mexico

Problem

Cuttings samples submitted by Steve Phillips for determination of maturity (TAI-V_o) and microscopic organic analysis (MOA) indices.

Note: For discussion in this report, the samples are grouped mainly by Tmax values, the interval 3620-6400 has Tmax values in the oil generating range, the interval 6480-7770 had insufficient S2 values during pyrolysis to measure Tmax and the third interval from 7840-8800 has Tmax values in the gas-cond. generative range.

Specimens of Lycospora sp. were used or considered in making TAI determinations. The restricted range of this palynomorph is Devonian, Miss. and Penn., thus corroborating to some extent the stratigraphy as given. They were first noted in sample 8, (5560-5640) and were generally evident to TD.

Sample 33 (8310-8320) was very good for determination of vitrinite reflectance. The vitrinite plug for sample 28 (8770-8800) seemed noticeably clean of caving material. Also the TAI slide for this sample had a small TAI spread indicating a homogeneous sample. The TAI slide for sample 30 (8960-9000) contained two groups of TAI indices, the 3.8-3.9 (dry gas) group was interpreted as reworked, the less mature group 3.6-3.7 was interpreted as probably being in place and corroborated by vitrinite reflectance.

11	(6350-6400)	0	10	60	30	1.13	.8

Maturity

Tmax sample 3, 442°C oil generative zone.
samples 4-7, 9-11, 444°C-455°C oil gen. zone.
sample 8, 432°C immature. Note: Tmax value is not substantiated by TAI and therefore should not be used.

V_o sample 31, .83 (=TAI 2.8-2.9) oil gen. zone.
sample 4, 1.2 (=TAI 3.2) early gas-cond. gen. zone.
Note: sample 4 has a higher V_o reading than might be expected from adjacent interval, could be measuring reworked vitrinite.
sample 11, 1.31 (-TAI 3.3-3.4) gas-cond. gen. zone.

TAI sample 1, 2.9 (=V_o .90) oil gen. zone.
sample 31, 2.9-3.1 (=V_o .90-1.1) oil gen. zone.
sample 8, 2.9-3.0 (=V_o .90-1.0) oil gen. zone.

Amount (of organics)

Wt % TOC samples 1-3, .53-.98 fair (.5-1.0).
samples 5-7, .72-.83 fair (.5-1.0).
samples 4, 8-11, 1.01-1.76 good (1.0-2.0)

Organic yield, see above.

29	(8880-8940)	0	20	50	30	1.88	.3
30	(8960-9000)	0	20	50	30	2.59	.2

Maturity

Tmax samples 20, 21, 23, 25, 26 and 27, ^{492°C} 481⁰-~~510~~°C Gas cond. gen. zone. sample 22, 510°C. Post mature. Note: This value is out of context with adjacent values. This sample also has a higher maturity index (TAI 3.7-3.8= V_o 2.0-2.7) which is actually not inconsistent with the Tmax of 510°C but the thermal gradient as indicated by adjacent samples doesn't accommodate these maturity values. The most likely reason for higher indices in this sample is that a perhaps larger amount of redeposited material was present in this interval.

V_o sample 33, 1.39 (=TAI 3.3-3.4) gas-cond. gen. zone.
 sample 35, 1.61 (=TAI 3.5-3.6) gas-cond. gen. zone.
 sample 28, 1.53 (=TAI 3.5-3.6) gas-cond. gen. zone.
 sample 29, 1.67 (=TAI 3.5-3.6) gas-cond. gen. zone.
 sample 30, 1.75 (=TAI 3.6-3.7) gas-cond. gen. zone.

TAI sample 28, 3.5-3.6 (= V_o 1.5-2.0) gas-cond. gen. zone.
 sample 30, 3.6-3.7 (= V_o 1.7-2.0) gas-cond. gen. zone.

Amount (of organics)

samples 20, 24, and 29, 1.44-1.88 good (1.0-2.0).
 samples 21, 22, 23, 25, 26, 27, 28, and 30, 2.01-9.55 very good (2.0-10.0).

Organic yield, see above.
