

APPENDIX OF PLAY MAPS IN PDF FORMAT

This appendix contains play maps in *Portable Document Format* (pdf) for all of the oil plays in the New Mexico part of the Permian basin except for Play 106 – Devonian Thirtyone Deepwater Chert play. These maps show locations of reservoirs, play boundaries, and major geologic elements (Abo shelf edge, Wolfcamp shelf margin, Capitan reef trend and edge of Central Basin Platform) superimposed on a township-range grid. Major roads and cities are also shown. It was not possible to conveniently place these pdf files in the main body of the open file report because of their large display size.
