New Mexico Geology

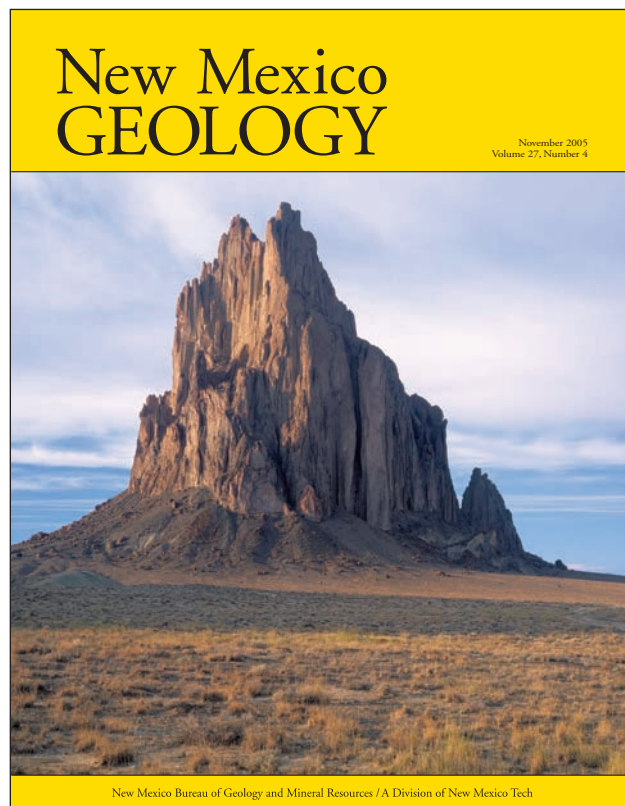

reaches a professional audience of geoscientists throughout the country

New Mexico Geology is a scholarly journal that publishes refereed articles on original earth science research. Manuscripts are submitted on a variety of research topics in and around New Mexico, including regional tectonics, structure, stratigraphy, sedimentology, paleontology, energy and mineral resources, the quality and distribution of our water resources, and the paleoseismic record and volcanic history of the state.

Contributions of material for consideration in future issues of *New Mexico Geology* are welcome: original, not previously published research as well as short articles. We welcome news items, too: dates of local meetings, and announcements of conventions, symposia, and field trips.

Did you know:

- NMG is indexed in the American Geological Institute's GeoRef; Elsevier Science's GEOBASE, which includes Geological Abstracts and six other bibliographic databases; Petroleum Abstracts; I M M (Institution of Mining and Metallurgy) Abstracts and Index; Zoological Record; and *Referativnyi Zhurnal*, the abstracts journal of the All-Russian Institute of Scientific and Technical Information (VINITI). We are hoping to be included in SciSearch and GeoScienceWorld in the future.
- NMG is published by New Mexico's geologic survey, New Mexico Bureau of Geology and Mineral Resources, a state agency and research and service division of New Mexico Institute of Mining and Technology. Thus it belongs to the exclusive 20% of science, technology, and medical journals that are NOT owned by one of the six worldwide publishing giants.
- NMG's current subscription cost of \$12.00 per year (\$22.00 for two years) reflects only a 20% increase since 2001. The average journal subscription increase from 2001 to 2005 was closer to 75%.
- NMG never accepts advertisements; it's earth science from cover to cover.
- NMG is in the periodical collections of 75 university, public, and corporate libraries across the country.
- NMG cooperates with the following document suppliers: Chemical Abstracts Document Detective Service, Columbus, Ohio; Petroleum Abstracts Document Delivery System, Tulsa, Oklahoma; and the Linda Hall Library of Science, Engineering, and Technology, Document Services Department, Kansas City, Missouri.
- NMG's "Guidelines for submissions" are available as a downloadable pdf file on our Web site at geoinfo.nmt.edu/publications/nmg/home.html.
