The diagram is a geologic map of the Williamsburg NW 7.5-Minute Quadrangle, Sierra County, New Mexico. It shows various geological layers and formations with different symbols and colors to indicate their characteristics. The map includes a legend with explanations for the symbols used, and there are notes or labels on specific areas indicating additional geological information.

The map provides a detailed view of the geology in the region, with indications of different rock types, stratigraphic units, and structural features. It is a useful tool for understanding the geological history and current geology of the area. The map is likely part of a series of similar maps published by the New Mexico Bureau of Geology and Mineral Resources.
