Comments to Map Users

The views and conclusions contained herein should not be interpreted as necessarily representing the official views or policies, either expressed or implied, of the New Mexico Bureau of Geology and Mineral Resources. The New Mexico Bureau of Geology and Mineral Resources shall not be liable under any circumstances for any direct, indirect, special, incidental, consequential or other damages arising from, or related to, the use of this product.

Risk of collapsible soils is a complex issue represented by the map, which shows known locations of collapsible soils. Because there is no known size or type of collapsible soil hazards, the map is not intended for risk assessment or for use in site-specific assessments. More detailed studies may be needed. This map is neither intended nor adequate for risk assessment, nor is the map intended or adequate for site-specific assessments.

This map is intended for use at a spatial scale of 1:750,000 for regional planning purposes and for determining where more detailed studies may be needed. The map is necessarily incomplete and is based on personal, news, and legal reports of hydrocompaction. This map is intended for use at a spatial scale of 1:750,000 for regional planning purposes and for determining where more detailed studies may be needed.
