### **Teaching Experience:**

**Summer Semester 2010 to present:** NM Tech Field Camp: Guest instructor.

Provide logistical support, instruction and guidance on mapping projects in the Rio Chama corridor.

**Spring Semester 2012:** Advanced Topics in Geology: Geology of the Grand Canyon Region: Duties include: design and prepare all exercises, report and lectures for seminar course.

**Spring Semester 1996, 1998, 2000:** Structural Geology teaching assistant: Duties include: design and prepare laboratory exercises, instruction of laboratory projects, 3 hours per week office hours, participate in field exercises, grade lab exercises and assign final grades.

**Fall Semester 1997, 2002 Spring Semester 2002:** Physical Geology Laboratory Instructor: Introduction to Geology reaches out to two different students: career-track geologists and non-geology degree seeking students. In this light, Introduction to Geology, when taught with enthusiasm, can be used successfully as a platform to attract undecided majors towards geology. Duties include: preparation of laboratory exercises, instruction of laboratory projects, 3 hours per week office hours, participate in field exercises, grade lab exercises and assign final grades.

**Summer Session 1997, 1998, 1999, 2000, 2001, 2002:** Advanced Field Geology Instructor (graduate level field course): Duties include: Reconnoiter and help design field exercises, plan and implement logistical support for field projects (including: lodging/camping, food, transportation, etc.), instruct students on field based techniques for geologic mapping (this includes: compilation of existing mapping, using remote sensing data in the field to compliment field observations, and making geologic maps). Field based projects are multidisciplinary, from Precambrian metamorphic rocks to Quaternary deposits.

**Spring and Fall Semesters 2003:** New Mexico Field Geology teaching assistant: The course involves weekly fieldtrips to nearby scenic areas such as the Sandia Mountains, central Rio Grande rift, Albuquerque volcanoes, Colorado Plateau, Albuquerque Basin, and Jemez Mountains. Observations, rock identification, note taking, and other field methods (introductions to compass use, section description, and mapping) are taught in the field. This course offers an important opportunity to expose

introductory students to basic field methods at classic localities in New Mexico and further broadened my experience in New Mexico geology.
